

NUK® Bottles and Accessories

Babies can eat up to eight times a day, so cleaning bottles and warming milk and food can be a time consuming chore. NUK brings a new level of convenience to parents of infants with a new line of accessories that take the monotony and guesswork out of baby's mealtime. With innovative, safety-conscious designs, NUK accessories make mom's work faster, easier and more efficient.

Available January 2010

***NUK Ready to Feed bottle warmer:** Time-saving product allows baby's bottle to be ready in less than two minutes. Baby's food heated more naturally than in the microwave. Universal size allows all bottles and food jars to be warmed with the same accessory. Power cord detaches from the warmer for easy storage; ready light indicates when warmer has reached ideal temperature. SRP: \$39.96

***NUK Quick n' Ready steam sterilizer:** Convenient accessory means greater safety and speed when sterilizing bottles, baby accessories, and breastfeeding items. Effective in 8 minutes and requires no pre-heating. Using natural steam, the sterilization process is guaranteed safe, gentle and, most importantly, effective. No more unsafe, cumbersome pots of boiling water to keep baby items clean and germ-free. SRP: \$79.98

NUK's innovative bottle accessories work especially well with NUK's BPA-free baby bottles, available in 5 oz and 10 oz. NUK's wide and narrow neck orthodontic systems both feature bottles with appealing colors and designs: blue ships, green dragonflies and pink flowers. All nipples feature the NUK Anti-Colic Air System, which encourages proper oral development, improves digestion and reduces colic. The nipples are available in slow, medium and fast flows. The bottles are available in packs of one or three, while the nipples come in packs of two. NUK's mix and match bottles and nipples feature interchangeable components and allow mom to choose the best bottle for her baby.

Available Now

* **NUK Orthodontic System (wide neck):** wide neck nipples available in silicone only. The wide base of the nipple promotes correct repositioning of the infant's jaw while mimicking the shape of the natural breast. Features allow for a seamless transition from breast to bottle.

***NUK Orthodontic System (narrow neck):** narrow neck nipples available in both silicone and latex; latex only available with slow flow. Shaped like mother's nipple, narrow neck orthodontic nipples reduce amount of air baby swallows during feeding.
