

## NUK® Oral Care

Teething is a natural part of a baby's development but can cause significant discomfort. Chewing objects helps reduce tension in baby's jaw and relieves pain, so NUK's new line of oral care products provide a well-designed, BPA-free solution. Massage and cooling features soothe baby's gums, stimulate the skin and familiarize baby with the process of oral hygiene.

*Available January 2010*

**\*NUK Healthy Start training tooth brush set:** includes cleaning trainer, brushing trainer, and protective ring

\*Cleaning trainer: BPA-free product gently massages gums and palate, soothing discomfort and easing pain.

\*Brushing trainer: Baby's first BPA-free toothbrush cleans and cares for new teeth.

\*Ring: Protective ring limits how far baby can push brush into mouth. Ring also doubles as a stand.

\*SRP: \$5.99 / 2pk and ring.

**\*NUK Teeth EZ:** BPA-free cooling rings remain cold with no liquid filling for a safe alternative. Three-pack of rings range from soft to firm, so baby can choose the teething product that feels best. Soft ring lightly massages baby's gums to give support while teething; firm ring gives more intense massage. Ergonomic shape ensures all parts of the jaw are reached. The different materials, colors and surfaces, as well as basic assembly, stimulate learning. SRP: \$5.98 / 3pk
